

100x35PR Intellectual Property Agreement

For the class ICOM5016 at UPRM, the coordinators asks our team: Jahannie Torres (Designer and Developer), Gil J. Reyes (Designer and Developer) and Stephan Elías (Designer and Developer) to create a social network web application with an original design and potential of commercialization. This is our Agreement for this project.

What we agreed to do:

1. Scope of Work: The application will allow users to search for locations in Puerto Rico, descriptions, photos and contact information. Users can add and remove friends. They will be able to share the locations of their map, favorite and visited spots. The application will calculate the percent of visited places and color the map depending on the frequency, among other features such as two languages.

Each team member will work equally. Therefore, it was decided that if all the group members accomplish their tasks and the application is published after the course then the monetary gain will be divided in equal parts.

If the Project Plan changes or if the scope of the project changes then, team members will negotiate and sign another agreement.

2. Project Milestones: We have agreed that we will work on this project in phases. The specification of the phases are in the Master Project Plan, and if they change significantly, team members will negotiate and sign another agreement.

3. Final Deliverables: We will have the project in a GitHub repository accessible to each one of the members. These files will be html, bootstrap, JavaScript and C#.

4. Original Work/Conflicts: We promise that we will not use this for another project. We all owners of the intellectual property rights, including if we patentee this.

5. Payment: This project will be developed for free and there's not a determined amount of work hours.

6. Feedback: We agree to give feedback so we can understand concerns, objections and corrections. We will test the software to ensure that it's working properly.
